

PAPERCUT & ELATEC RFID

# Print management in healthcare has never been easier

## When information security is critical

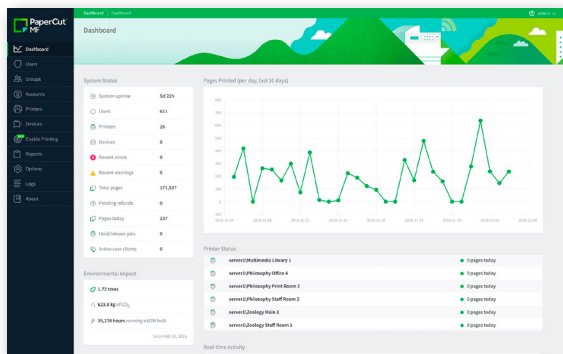

Patient records and prescriptions. Financial and HR information. Hospital quality data. Don't let your printer be the weak link in your information security plan. With PaperCut's print management software and ELATEC's user authentication solution, you can ensure that printed documents don't end up in the wrong hands.

## Healthcare challenges

1. HIPAA regulations for patient confidentiality and protection of sensitive business information
2. Cost management and accounting for multiple departments and individuals
3. A busy, fast-paced environment with little time for IT management

PaperCut is a print management software company that's helping hundreds of millions of people around the globe to minimize waste while having a secure and easy printing experience.

- ▶ Easily print from any device, anytime
- ▶ Secure all documents before, during and after printing
- ▶ Shrink your footprint and your bills

ELATEC provides best-in-class user authentication and access control solutions using radio-frequency identification (RFID) and BLE/NFC smartphone applications.

- ▶ Secure, contactless and hygienic user authentication
- ▶ Integrates with any multifunction printer
- ▶ Leverages existing employee ID cards and BYOD mobile devices

#### CHALLENGE #1

## Protect sensitive patient and business information

Hospitals and healthcare providers print many documents that contain sensitive or regulated information, including patient records and bills, financial and HR records, and even prescriptions. With PaperCut and ELATEC, users can print to any networked printer from any workstation or device. The print job does not release until it is authorized at the printer using the employee badge or mobile device, ensuring that confidential information is not left on the printer or picked up by the wrong person.

### What this solution could look like:

#### Universal authentication and access control

ELATEC readers **work with 60+ RFID card technologies** and BLE/NFC, so users can leverage their existing employee ID badges or mobile devices to access printer functions.

#### Secure Print Release

Secure Print Release functionality in PaperCut software enables your end users to walk up, **wave their ID credential over any printer**, then get back to taking care of your patients.

## CHALLENGE #2

# Control and manage printing costs

Need to control your printing budget? Print management can help you cut costs for paper, ink and printer maintenance by reducing misuse of office printers. PaperCut software also helps you properly allocate printing costs among business units—a huge help for large hospital systems with hundreds of employees and dozens of departments. Now, you can share printers between departments and still ensure that costs are allocated fairly based on actual use.

### What this solution could look like:

## ELATEC

RFID Systems

RFID is a highly secure and reliable method of identifying users. It is more secure than a PIN or password system, as employee ID cards are hard to counterfeit and easy to deactivate if lost or stolen. **ELATEC readers support advanced encryption for secure healthcare environments.** That means you know exactly who is using hospital printers and can lock out unauthorized users.

## PaperCut<sup>™</sup> MF

PaperCut MF comes with **80+ reports to identify who, what, when, where, why and how your users are utilizing or misusing your print and copy fleet.** It also allows for digital watermarks and print archiving so you can track documents after they've been printed.

# Keep everything moving smoothly

Hospitals and clinics are busy places. Who has time to troubleshoot IT issues related to print management? You need a print management solution that will ensure that clinicians and staff can get their hands on the documents they need quickly and without fuss. The solution also needs to be easy for IT staff to support and maintain. PaperCut and ELATEC work together for seamless print management, so you can stay focused on patient care.

## What this solution could look like:

### Easy reader installation and remote configuration

ELATEC readers are plug-and-play for easy installation by your IT staff or your printer Authorized Service Provider. They also **support remote configuration and firmware updates for easy maintenance** of large, distributed networks of multifunction printers. And ELATEC readers come with the most advanced API in the industry, so they can be configured for custom applications and emerging security requirements.

### Find-Me feature

PaperCut's Find-Me print feature means print jobs follow your users. All they have to do is hit print at a medical cart, workstation, laptop, tablet etc., and release their jobs from **whichever printer they're close to, whenever they want.** Add Print Deploy, and installing print queues and drivers goes from time-consuming and tedious to lightning-fast and fully automated.

## Still want to know more?

PaperCut and Elatec are partnering together to get you the best solution to face current challenges. Want to learn more about solutions from each of the teams?
