

A PARTNERSHIP FOR HEALTHCARE SECURITY

Secure authentication and print management in healthcare

A cost-efficient and secure print management solution

With PaperCut's easy-to-use print management software, plus expertise in secure authentication management from rf IDEAS, you can overcome three typical challenges to implementing a secure and cost-effective print management solution.

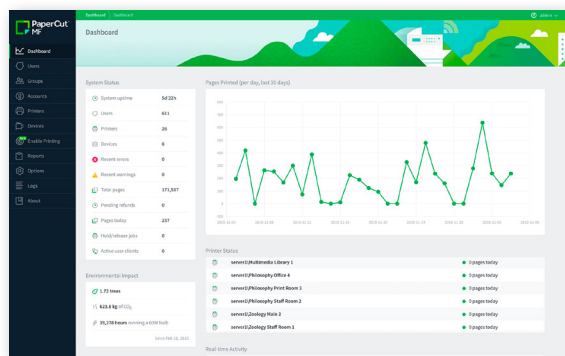

Healthcare challenges

1. Misplaced and misprinted patient health information
2. Compliance and accountability for PHI
3. Expense, implementation difficulties and workflow disruptions

Security solutions from leading industry experts rf IDEAS and PaperCut.

PaperCut is a print management software company that's helping hundreds of millions of people around the globe to minimize waste while having a secure and easy printing experience.

- ▶ Easily print from any device, anytime
- ▶ Secure all documents before, during and after printing
- ▶ Shrink your footprint and your bills

rf IDEAS provides the world's most trusted contactless credential readers to support single sign-on, secure print, attendance tracking and other secure applications in healthcare, manufacturing, government and enterprise.

- ▶ HIPAA-compliant access control
- ▶ Improved patient experience
- ▶ Simple, secure caregiver access

CHALLENGE #1

Avoid misplaced and misprinted PHI

Authentication at the device is the critical step in ensuring that patient health information isn't left in a printer tray or picked up by the wrong person. There are two pain points here: (1) ensuring adequate security without impeding productivity while (2) authenticating the right user at the right printer at the right time.

What a secure print management solution could look like:

Smart card readers

Smart card readers from rf IDEAS are a vast improvement for **seamless, secure authentication, productivity and satisfaction** for healthcare providers who, on average, enter their passwords up to 70 times a day.

Secure Print Release

Secure Print Release functionality in PaperCut software enables your end users to walk up, **wave their ID credential over any printer**, then get back to taking care of your patients.

CHALLENGE #2

Manage compliance & accountability

The whole point of your secure print management strategy is to make sure the right information is getting to the right people. A part of this is knowing how to authenticate your users and data, while also knowing who has access to what and when.

What a compliant print management solution could look like:

With just a tap or a wave, contactless WAVE ID® readers from rf IDEAS provide maximum flexibility for access control in hospitals and clinics, **reading the widest range of credentials** and including form factors that are ideal for laptops and workstations, medical devices and carts, supply cabinets, vending machines and more.

PaperCut MF comes with **80+ reports to identify who, what, when, where, why and how your users are utilizing or misusing your print and copy fleet.** It also allows for digital watermarks and print archiving so you can track documents after they've been printed.

Simplify workflows while ensuring ease of use

Many healthcare IT teams work in distributed print environments with multiple sites, print servers, and limited visibility. This makes adding or moving a printer a nightmare to install and manage. You need to find an inexpensive solution that will save you money, time and the headache of cumbersome integration or MFD set up. Bonus if you can find a solution that enables your mobile workforce and actually simplifies workflows for your users.

What an easy-to-use print management solution could look like:

Mobile workforce

Your workforce is mobile, and your printing should be too. PaperCut Mobility Print and rf IDEAS® mobile readers allow for **flexibility to access MFPs from various areas of the office** or remote servers. No more cumbersome or time consuming passwords — tap, pick up and get back to your patients.

Find-Me feature

PaperCut's Find-Me print feature means print jobs follow your users. All they have to do is hit print at a medical cart, workstation, laptop, tablet etc., and release their jobs from **whichever printer they're close to, whenever they want**. Add Print Deploy, and installing print queues and drivers goes from time-consuming and tedious to lightning-fast and fully automated.

Still want to know more?

PaperCut and rf IDEAS are partnering together to get you the best solution to face current challenges. Want to learn more about the partnership, solutions, or to set up a meeting with the teams?
