TALK TRACK

QUALIFYING QUESTIONS

RESPONSES

Do you have trouble with Data Collection Agents (DCA) losing connectivity?

KPAX is designed to accommodate all types of customer environmental situations that cause agents to stop reporting.

Does your current device management software suffer from lack of innovation and support?

KPAX is the most innovative and versatile fleet management solution on the market today, created with an open ecosystem to work with all popular third-party software applications and is supported by ACDI's award-winning technical support team.

Does your current device management software rely solely on software or embedded DCA's?

The KPAX Agents are designed to provide flexible deployment options that maintain connectivity to all printing systems in a client's network, even in poorly adapted client environments without workstation control or servers.

Does your current device management require manual intervention for alerts and notifications?

KPAX utilizes AI and machine learning to continuously monitor and predict supply needs and will recommend inventory updates as needed.

ELEVATOR PITCH

KPAX is a centralized device management solution for multibrand office printing hardware. It's easy to install, manage and optimize your MPS program to reduce operating costs, improve service quality and develop new revenue opportunities.
