SCANSHARE EMAIL CAPTURE

Scanshare is ACDI's advanced capture and digital workflow solution. Scanshare uses workflow automation to streamline scanning and data input processes for forms and documents.
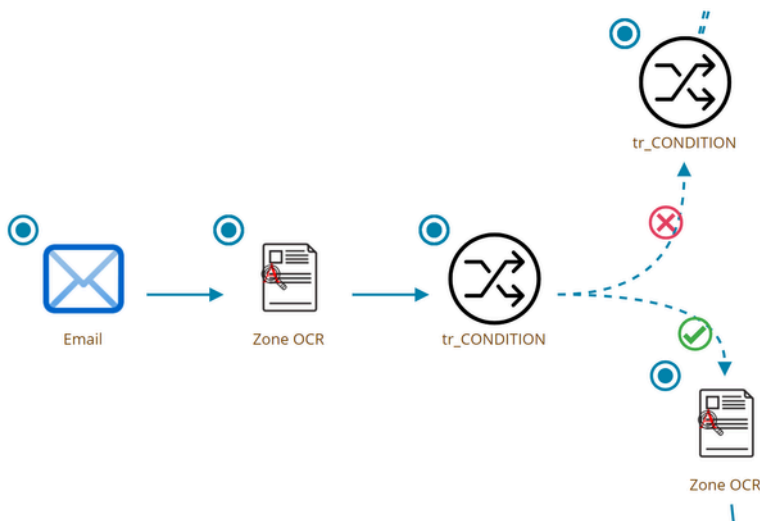

With Scanshare Email Capture module, you can capture attached documents, process, and store them with one of Scanshare's many storage modules.

HOW IT WORKS

The Email Capture module captures emails and attachments via SMTP, Exchange, and Office 365*.

The Email Capture module connects to an email server and checks for new emails to download and parse.

Attachments are downloaded and queued for processing and contents such as the email subject and body can be used as variables during the workflow.

*Office 365 requires OAuth for authentication
