A CUSTOMER GUIDE TO EASY PRINTING IN HEALTHCARE

# Introduce easy to use print management for healthcare

Healthcare workers are always-on, ready to save lives in any situation 24/7 kind of people. As a technology professional, you need your infrastructure to match that lifestyle.

PaperCut empowers you to make printing, scanning and faxing easy for end users, whether they're printing from a mobile device or a standard workstation. We've got truckloads to offer, from industry-leading third-party integrations with EMR systems like Epic, right through to easy queue management with Print Deploy.
## Any printer, any operating system – no matter the size

It doesn't matter what size your organization, what printers you use, or what operating system you prefer – PaperCut will just work. We take a cross-platform, vendor-neutral approach to technology to deliver one of the industries strongest print management solutions. As techies, we love Windows, Linux, Mac, Chromebook, Android, iOS and yes, even Novell.

## Ways we make printing easy

### EMR Integrations

Hospitals and other health organizations can have complex printing workflows and different types of print jobs, including wristbands, labels, reports, discharge orders, and care plans. Managing such a wide variety of software systems as well as printing workflows can quickly become complex and time-consuming for the System Administrator.

That's why we have a team that works to integrate into market leading EMR solutions like Epic, Cerner, Meditech and others, so your printing solution is not only helping you protect PHI, but it's integrated into a system that already works for you.

### Print Deploy

Print Deploy is a print queue deployment tool that gets the right printer drivers and print queues to the right person in the right location, effectively. It enables users to move between locations, like different clinics, offices, or campuses, without setting up any new drivers. The location's printers are dynamically downloaded onto their computers – again, it just works!
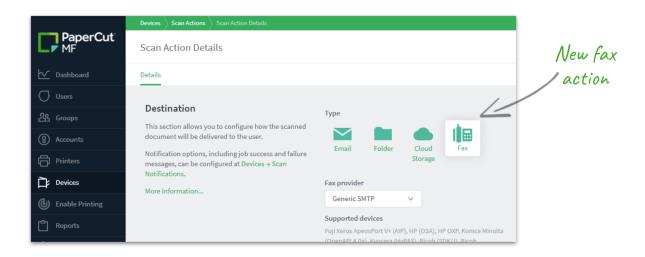

And just as importantly, Print Deploy simplifies the time consuming, frustrating tasks of setting up print queues and deploying drivers in managed environments.

**Faxing**

75% of medical communication in the U.S. today happens via fax machine. That's right, *faxing*. That's roughly 17 billion individual documents sent via fax machine, with current research and trends reflecting more faxing machine purchases in the future. So where does PaperCut make this workflow easier?

- A single and simple user interface for printing, scanning and faxing means end users only have to authenticate once
- Set up alerts so users know when their fax documents have reached their destination
- Administrators want control over who can send what where - and rest assured all faxing is happening securely.

**Mobility Print**

Mobility Print delivers network print services for iOS, Windows, macOS, Android, and Chrome OS devices across mixed fleet environments. Secure Print Release and authenticated printing are available when you use Mobility Print together with PaperCut MF.

It's simple really. Mobility Print makes printing easy from any client and provides a consistent print experience irrespective of the make and model of the printer. And it achieves both by having the Mobility Print server do the heavy lifting. The best part? Mobility print is free! No catch, no phishing — just a solution we view as a basic printing need.
